

## ❑ HouseHunt: Finding Your Perfect Rental Home

**Category:** Full Stack Development **Team ID:** LTVIP2025TMID54115 **Team Size:** 4

### Team Members:

-   Team Leader: Teetla Ganesh
-   Team Member: Ullibheerappagaari Bheeresh
-   Team Member: Vaishnavi Mulinti
-   Team Member: Yerragudla Mallikarjuna

## ❑ Project Overview

**HouseHunt** is a web-based rental platform built using the MERN stack. It facilitates end-to-end rental workflows between property owners and renters. The platform includes features like account management, property browsing with filters, secure bookings, and communication—all under a well-governed, responsive, and secure framework.

## ❑ Skills Required

- HTML5, CSS3
- JavaScript (ES6)
- Bootstrap & Material UI
- React.js (Frontend)
- Node.js & Express.js (Backend)
- MongoDB (Database)

## ❑ Key Features

- **User Roles:** Renter, Owner, Admin
- **Secure Login/Registration**
- **Property Listings:** with dynamic filters
- **Real-Time Inquiry & Messaging**
- **Booking & Lease Flow:** managed entirely within the platform
- **Admin Controls:** user verification, content moderation
- **Responsive UI** using Bootstrap and Material UI

## ❑ Scenario-Based Flow

### User: Alice – a Renter

1. Registers and logs in
2. Browses properties using filters (location, price, rooms, etc.)

3. Sends an inquiry for a selected apartment
4. Receives booking approval & negotiates lease with the owner
5. Confirms rental and moves in

#### **User: Bob – a Property Owner**

1. Registers and requests approval
2. Admin reviews and approves ownership
3. Bob adds and manages properties
4. Accepts/declines rental requests

#### **Admin Role**

- Approves new owners and monitors user activity
- Ensures compliance with platform policies

#### ☐ **Technical Architecture**

##### **Frontend**

- Built with **React.js**
- Styled with **Bootstrap & Material UI**
- Uses **Axios** for HTTP communication
- Fully responsive across devices

##### **Backend**

- **Node.js** with **Express.js** for RESTful APIs
- Modular route and controller architecture
- Implements business logic and authorization layers

##### **Database**

- **MongoDB**: stores user info, listings, transactions, and communication logs
- Mongoose ODM for schema design and validation

#### ☐ **Security & Governance**

- Token-based authentication (JWT or similar)
- Form validation & role-based access control
- Admin interface for oversight and moderation
- Data encryption and secure messaging

#### ☒ **Future Enhancements**

- Integration with **Google Maps** for location visualization

- **Image upload** support for property listings
- **Payment gateway** for online rental processing
- Mobile app version using **React Native**
- Smart suggestions with **ML/AI** (e.g. best-match listings)
